

Pop-Up Buoy Recovery System

DeepWater Buoyancy's Pop-Up Buoy Recovery System (PUB) allows for direct retrieval of seabed packages, such as anchors, anchor lines, and bottom-mounted frames and instruments. Easily mounted to any framework, the assembly sits on the seafloor until the acoustic release is activated. Once the release completes its disconnection, the buoy lifts free from the canister and rises to the surface. A synthetic line connects the buoy directly to the framework of the seabed item and allows for retrieval.

The buoy is outfitted with an electropolished 316 stainless steel frame. The canister holds 75 meters of 1/4" synthetic line. *(Other line lengths are available upon request.)* The recovery buoy is made from high-strength DeepTec® solid syntactic foam. The foam is finished with an abrasion-resistant, polyurethane elastomer coating.

The canister subassembly is made from PVC and 316SS plate. It has a rugged design and has attachment features to permit various mounting configurations, including easy mounting to our BTM-AL50 tripod bottom mounts. Our standard recovery systems are designed to work with Benthos and EdgeTech products shown below. We also offer custom recovery systems.

PART NUMBER	DESCRIPTION
PUB-R500-875	Pop-Up Buoy Recovery System for Benthos R500 & 875 Release with 75 meters of 1/4" Synthetic Line.
PUB-PORT-LF-SD	Pop-Up Buoy Recovery System for EdgeTech PORT-LF SD Release with 75 meters of 1/4" Synthetic Line.
PUB-BRKT-01	Bracket to Mount PUB to BTM-AL50. Includes 316SS Mounting Hardware and Isolation Bushings.
PUB-BRKT-02	Bracket to Mount PUB to a Single or to Dual Mounting Holes for 1/2" Hardware. Includes 316SS Hardware and Isolation Bushings.

Note: Release is sold separately. Please contact us for details.
